**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claims 1, 5-7, and 11-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Aung. Please refer to paragraph 2 of the Office Action dated May 26, 2009 and the section titled Response to Arguments below. Additionally, with respect to claims 17-20, Kortokoff sounds directly correlate to the pulse waves measured on the basis of the amount of compression utilized, and therefore, are impliedly a quantification target as broadly claimed.

***Claim Rejections - 35 USC § 103***

3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
4. Claims 4 and 10 are rejected under 35 U.S.C. 103(a) as being unpatentable over Aung alone. Please refer to paragraph 4 of the above cited Office Action.

***Response to Arguments***

5. Applicant's arguments filed 12/14/2009 have been fully considered but they are not persuasive. Examiner notes that while Applicant has gone to great lengths in explaining the differences between the prior art and the current inventive concept, the claims still remain broad and remain rejected by the prior art. Applicant is correct in

asserting that the devices are utilized for different purposes, but as an initial matter, Examiner notes Applicant has not claimed utilizing pressure to increase muscular strength in any of the method claims, but has rather claimed a generic method carried out with a control device. Examiner notes that the ideal quantification target may correlate to the non-occurrence of the pulse waves after an initial increase in pressure to the cuff creates the presence of pulse waves. That is, Applicant has not identified what the ideal quantification target is in the claims. The claims as currently presented do not preclude such a reading, and as stated, it appears Applicant is attempting to argue a more narrow reading of the claims based on limitations in the specification. In the broadest reasonable interpretation, the claims are still met by the Aung reference.
